PROFESSIONAL SUMMARY

Computer Science graduate and Android Developer Intern with strong hands-on experience in Java and React building scalable applications across mobile and web. Proficient in Java-based backend logic, OOP principles, and RESTful API design, alongside React 18 for dynamic, component-driven front-end development

EDUCATION

Bachelor of Engineering — Computer Science and Engineering

2022 – 2026

City Engineering College, Bangalore | CGPA: 7.5 / 10

EXPERIENCE

Android App Developer Intern — Mindmatrix

Feb 2026 – May 2026

Kotlin · Android Studio · Generative AI Integration · REST APIs

- Built scalable Android applications in Kotlin using modern architecture patterns (MVVM) and Jetpack components, improving code maintainability across feature modules.
- Integrated Generative AI APIs to power context-aware in-app features, directly enhancing user interaction and product intelligence.
- Designed and consumed RESTful APIs for seamless client-server data communication, and optimized application performance to reduce load times and improve responsiveness.

PROJECTS

AI-Assisted Kannada Literature Learning App | Kotlin, Jetpack Compose, Android Studio | [Link](#)

- Built an Android app promoting Kannada literature through interactive poem reading, Bhavartha explanations, poet profiles, transliteration, and audio recitation — combining content and language-learning features in one experience.
- Implemented a modern, responsive UI with Jetpack Compose and Material 3, improving navigation and accessibility for end users.
- Engineered offline-first content access using local JSON-based data management and MediaPlayer APIs for audio playback.
- Applied modular architecture and reusable composable components, reducing code duplication and easing future feature additions.

SHOPPINN — E-Commerce Web Application | React 18, React Router, Context API, CSS | [Link](#)

- Built a full-featured e-commerce web app in React 18 with client-side routing across five pages (Home, Item Detail, Cart, Checkout, Orders) using React Router v6.
- Implemented global state management using React Context API and useReducer — handling cart operations (add, remove, clear) and order tracking without any external library.
- Designed a dynamic checkout flow with real-time pricing logic — calculating subtotal, discount, tax, and total — and an order placement system that clears the cart on confirmation.
- Structured the codebase with reusable, single-responsibility components (Navbar, ItemList, Item, Cart, Checkout, Orders) and component-scoped CSS for maintainability.

TECHNICAL SKILLS

Languages: Java, Kotlin, JavaScript, SQL

Mobile & App Development: Android Studio, Jetpack Compose, Material 3

Web Technologies: React, HTML, CSS, Tailwind CSS

Tools: Git, GitHub

Core Concepts: OOPs
