PROFESSIONAL SUMMARY

Computer Science graduate and Android Developer Intern with strong hands-on experience in Java and React building scalable applications across mobile and web. Proficient in Java-based backend logic, OOP principles, and RESTful API design, alongside React 18 for dynamic, component-driven front-end development

EDUCATION

Bachelor of Engineering — Computer Science and Engineering

2022 – 2026

City Engineering College, Bangalore | CGPA: 7.5 / 10

TECHNICAL SKILLS

Languages: Java, Kotlin, JavaScript, SQL

Web Technologies: React, HTML, CSS, Tailwind CSS, SpringBoot

Tools: Git, GitHub

Core Concepts: OOPs

EXPERIENCE

Android App Developer Intern — Mindmatrix

Feb 2026 – May 2026

Kotlin · Android Studio · Generative AI Integration · REST APIs

- Built scalable Android applications in Kotlin using modern architecture patterns (MVVM) and Jetpack components, improving code maintainability across feature modules.
- Integrated Generative AI APIs to power context-aware in-app features, directly enhancing user interaction and product intelligence.
- Designed and consumed RESTful APIs for seamless client-server data communication, and optimized application performance to reduce load times and improve responsiveness.

PROJECTS

AI-Assisted Kannada Literature Learning App | Kotlin, Jetpack Compose, Android Studio | [Link](#)

- Built an Android app promoting Kannada literature through interactive poem reading, Bhavartha explanations, poet profiles, transliteration, and audio recitation — combining content and language-learning features in one experience.
- Implemented a modern, responsive UI with Jetpack Compose and Material 3, improving navigation and accessibility for end users.
- Engineered offline-first content access using local JSON-based data management and MediaPlayer APIs for audio playback.
- Applied modular architecture and reusable composable components, reducing code duplication and easing future feature additions.

RESUMEFLOW — Resume Screening Engine | React Spring Boot, Hibernate, MySQL, JWT

- Built a full-stack resume screening platform with separate Admin and Candidate portals for job management, candidate applications, resume uploads, and screening workflows.
- Implemented JWT-based authentication and role-based access control, enabling secure Candidate/Admin login and restricting portal features according to user roles.
- Developed resume screening logic using mandatory and optional skill matching, generating match scores and automatically classifying candidates as SHORTLISTED, MAYBE, or REJECTED.
- Designed REST APIs using Spring Boot, JPA/Hibernate, and MySQL for managing jobs, candidates, skills, applications, resumes, and screening results, with a responsive React frontend.
